QA Test Report

Project: Legal Case Repository Web App (Portfolio Sample)

Report Date: 2026-04-27

1. Objective

This document summarizes a sample QA review performed on the Legal Case Repository web application. The goal of testing was to validate core user flows, identify functional defects, and demonstrate structured QA documentation suitable for a freelance portfolio.

2. Scope of Testing

In Scope	Case list loading, search, filters, sorting, pagination, case details modal, export action, sign-in visibility
Out of Scope	Production security hardening, server performance, live payment/auth edge cases, cross-browser full
Test Types	Smoke testing, functional testing, exploratory testing, light regression review
Environment	Desktop web, Chromium-based browser, sample dataset embedded in application

3. Execution Summary

Metric	Count
Total Test Cases Designed	16
Executed	16
Passed	14
Failed	1
Observation / Enhancement	1
Overall Status	Conditionally Ready for demo / portfolio presentation

4. Key Findings

• Search, filtering, and case detail viewing are intuitive and suitable for day-to-day use.

• UI layout is clean and easy to understand for legal content browsing.

• Export action is clearly visible for end users.

• One medium-severity issue was documented in the import flow: repeated imports create duplicate records instead of updating existing entries.

• Admin-only actions are hidden for unauthenticated users, which is a positive UX and access-control cue.

6. Recommendation

The application is suitable as a portfolio/demo sample after documenting known limitations. For production readiness, the import behavior should be improved to prevent duplicate records and preserve stable identifiers during repeated uploads.
