Sample Bug Report

Project: Legal Case Repository Web App (Portfolio Sample)

Bug ID	BUG-IMPORT-001
Title	Re-importing CSV/XLSX creates duplicate records and random item identifiers
Module	Admin Import / Data Management
Severity	Medium
Priority	High
Environment	Desktop web, Chromium-based browser, authenticated admin user
Precondition	Admin is signed in and has access to import a dataset that already exists in the repository
Steps to Reproduce	1. Sign in as admin. 2. Click “Import CSV/XLSX”. 3. Upload a file containing cases already imported previously. 4. Wait for the “Import successful” message. 5. Return to the table and review the record count or sort by item number.
Expected Result	Existing records should be updated based on a stable unique key, or the system should warn the user before creating duplicates.
Actual Result	The system creates new Firestore records on every import, causing duplicate case entries and inconsistent numbering/identifiers.
Frequency	100% reproducible when the same dataset is imported again
Business Impact	Data integrity is reduced. Users may see duplicate legal cases, inflated totals, and confusion when referencing case numbers.
Suggested Fix	Use a stable unique ID from the imported dataset when saving records, or add duplicate detection before commit.
